Fancy trying your chances in a knockout online poker tournament? Progressive Knockout Tournaments are a type of poker tournament format that is becoming increasingly popular.

In this article, we'll explore what these tournaments are and why they are gaining traction in the poker world. So, read on to find out more about what Progressive Knockout Tournaments are and how you can use them to your advantage.

About

poker knockout tournaments

A knockout poker tournament sees every player puts up an additional bounty to their buy-in, and the winner of the hand will earn the bounty from each opponent.

It's called a knockout tournament because as players are eliminated, the remaining players win a portion of the bounty from the player who was knocked out.

Knockout tournaments are usually turbo tournaments, meaning that the blinds increase quickly and it's common for players to go all-in often.

The concept of a knockout

tournament is quite simple: the objective is to eliminate as many opponents as possible, thus increasing your chance of winning the overall tournament. It differs from other poker tournaments in that there is a small element of luck involved, since the size of your bounty depends on which player you manage to knock out.

The higher the

ranking of the opponent you eliminate, the bigger your bounty will be. For example, knocking out a high-ranked player in the middle of the tournament could result in a significant boost to your chip stack.

Progressive Knockout Tournaments (PKO)

Progressive Knockout Tournaments, or PKO, are a type of tournament format in poker. PKO tournaments are very popular with recreational players, as they provide the opportunity to win large payouts without having to go all the way to the final table.

In a Progressive Knockout Tournament, each player has a bounty on their head which increases with each elimination. As a result, as the tournament progresses, the

bounty on your head increases, making it more and more lucrative for other players to try to knock you out. When you eliminate another player, you receive half of their bounty, and the other half goes towards increasing your own bounty. This can create a dynamic and exciting atmosphere as players jockey for position to maximise their bounties.

The PKO format is also popular because it allows for bigger prizes than you would find in a typical freeze-out tournament. The prize pool is made up of both the buy-ins and the bounties that players have accumulated. As a result, the payout structure is typically top-heavy, meaning that there are larger prizes for those who make it deep into the tournament.

PKO tournaments can be a great way to get started with poker tournaments, as they are often more forgiving and less intimidating than traditional freeze-out events. Additionally, since all players have bounties on their head, there's always something to play for even if you don't make it to the final table.

PKO payouts

PKO payouts are usually top-heavy, meaning that the players at the final table will be rewarded with a larger portion of the prize pool than those who were knocked out earlier. This makes it more important to make sure you don't get knocked out before the last few tables. If you can make it to the end, you'll be in for a chance to win big!

Total Knockout Tournaments (TKO)

Total Knockout Tournaments (TKO)

are an exciting variant of Progressive Knockout Tournaments in which every player starts with a bounty, and each time you eliminate another player, you take their bounty! The player with the most bounties at the end wins the tournament.

Unlike

standard Progressive Knockout Tournaments, there is no prize pool in TKOs. Instead, players' buy-ins are used to fund the bounties, making TKOs a great way to increase the value of your buy-in while competing against fewer opponents. This can also create a more competitive atmosphere as players compete for bounties rather than the prize pool.

In addition, TKOs can be much faster than standard knockout tournaments since they only last until one player has eliminated all the other players' bounties. This makes them a great choice for those looking for a shorter, more intense poker experience.

TKO Payouts

The payouts for TKOs differ depending on the size of the tournament, but generally, the winner will receive all the bounties they've collected. Other players may also receive a share of the bounty pool based on their number of eliminations. Additionally, some TKO tournaments may also have a final table payout, giving you even more of an incentive to reach the later stages of the tournament.

Knockout Tournament Tips

If you are looking to get the most out of your time in a knockout tournament, then you need to make sure that you keep the following tips in mind.

Have a plan

Make sure you play tight early on. It is important to remember that in a knockout tournament, your focus should be on survival rather than maximizing profits. If you are playing too many hands early on, then you are likely to lose the bounty on your head.

Watch the opposition

When playing knockout tournaments, try to keep an eye on how your opponents are playing. If there are players who are particularly aggressive, then you may be able to take advantage of this by stealing blinds and making value bets when appropriate.

Check your chips

Pay attention to how

deep the stacks are at the table. If the average stack size is deep, then you should consider calling wider ranges with draws and made hands as well as reraising with strong holdings.

Learn from your mistakes

Don't let the pressure of getting knocked out

get to you too much. Remember that if you are getting knocked out in the early stages of the tournament, then it means that you are playing better than your opponents and taking advantage of their mistakes.

Have fun!

Finally, don't forget to have fun!

Knockout tournaments can be great fun and a great way to build your poker skills. So, enjoy yourself, stay focused and don't forget to take advantage of all the opportunities that these tournaments provide!

Knockout Poker Tournaments at William

Hill

William Hill Vegas is one of the biggest names in online poker, offering a variety of knockout tournaments to players, and we've got big games waiting to be played!

You'll have the chance to win additional prizes with TKO tournaments, which have an extra bounty prize when the last two players remain. You can find these and other knockout tournaments at William Hill in the Poker Lobby under the 'Tournaments' tab.

With a selection of tournament types and stakes, William Hill's Knockout Poker Tournaments provide something for everyone, from beginners to pros, so join in and have some fun playing in an online poker tournament today!

Científico responsável pela criação de estatinas, que previnem ataques cardíacos e AVCs, falece aos 90 anos

O cientista cujo trabalho levou à criação de estatinas, um composto químico que impede ataques cardíacos e AVCs, faleceu aos 90 anos.

Akira Endo descobriu o primeiro composto que reduz o colesterol ruim em 1973 em um laboratório em Tóquio. O biólogo japonês teria sido inspirado pelo descobrimento da penicilina por Alexander Fleming em 1928, o que o levou a estudar fungos ou leveduras para desenvolver medicamentos.

As estatinas atuam reduzindo a concentração no sangue de "colesterol ruim" e ajudaram a prolongar a vida de milhões de pessoas.

O prof. Bryan Williams, chefe científico e médico da British Heart Foundation, descreveu Endo como "um cientista notável".

Ele contou à News: "Isso mesmo foi o precursor do desenvolvimento de drogas estatinas", adicionando: "Elas realmente transformaram a prevenção de doenças cardíacas e AVC.

"Há muito poucos tratamentos na medicina que aconteceram nos últimos anos que tiveram um impacto tão dramático."

Médicos agora prescrevem rotineiramente estatinas para pessoas que tiveram um ataque cardíaco e aquelas que correm alto risco de doença cardíaca ou AVC.

Williams disse: "Incrível, o homem que iniciou o processo de descobrir como lidar com o problema do colesterol - e fornecer um tratamento que beneficiou e salvou as vidas de muitos, muitos milhões de pessoas - nunca recebeu o prêmio Nobel. Acho que é uma vergonha."

Endo nasceu no Japão rural em 1933 e estudou bioquímica na Universidade de Tohoku.

Foi trabalhando para a empresa farmacêutica japonesa Sankyo em 1973 que ele fez a descoberta. Na época, a única maneira de reduzir o "colesterol ruim" era combinar uma dieta desagradável com medicamentos que causavam efeitos colaterais desagradáveis.

Demorou muitos anos estudando milhares de fungos e cozinhando sopas de fungos antes de encontrar uma que reduzisse o colesterol.

Depois de testar 6.000 combinações diferentes, Endo e seus assistentes de laboratório testaram uma substância feita por *Penicillium citrinum*, um míldio azul-verde isolado do arroz de um comerciante de Quioto semelhante ao míldio que cresce em laranjas e limões velhos.

Em 1987, a primeira estatina, lovastatina, foi aprovada nos EUA para uso clínico.

Endo recebeu o Prêmio Japão em 2006 e o Prêmio Lasker, conhecido como o Prêmio Nobel dos EUA, em 2008.
