Poker television programs had been extremely popular, especially in North America and Europe, following the poker boom. This has especially become the case since the invention of the "pocket cam" in 1997 (and its first use in the United States in 2002), which allows viewers at home to see each player's hole cards. However, viewership has been declining dramatically in recent years, due to laws that restricted online play in the United States.

History [edit]

Poker has been appearing on television somewhat regularly since the late-1970s. In the United States, CBS started airing the final table of the World Series of Poker (WSOP) Main Event as an annual one-hour show around this time and later by ESPN, which were casino-produced shows produced under a time-buy arrangement for sports omnibus programming such as the CBS Sports Spectacular. For many years, the coverage was less than robust because viewers at home could not see what cards the players had or follow their progress visually through graphics. Instead, the coverage essentially involved the commentators guessing what cards the players had in a documentary style production.

In 1997, the hole cam, which allows audiences to see the hidden cards that players held in their hands, was introduced in Europe. The hole cam was patented by WSOP bracelet winner Henry Orenstein and first used in the Late Night Poker television series. It was used again in the inaugural Poker Million tournament in 2000 which boasted the attraction of the first £1,000,000 poker game on live television. By 1996, however, the ESPN one-hour highlight show only included hands that were shown down, so that the commentators, including Gabe Kaplan, could comment, in post-production, on the hands while they were being played out. The commentators referred to this as "taking a peek at the cards", and provided the first contemporary announcing on hands during the play in poker history. By 2001, however, Late Night Poker had been cancelled in the UK and televised poker could no longer be found in Europe. In the US, the 1999, 2000, and 2001 World Series of Poker events were only broadcast in one-hour documentaries on the Discovery Networks.

In 1999, documentary filmmaker Steven Lipscomb produced and directed a documentary on the

WSOP for the Discovery Channel. It was the first U.S. poker production funded entirely by a television network rather than the casino. When the 1999 WSOP aired, it doubled its audience over the hour time slot. Seeing the audience reaction, Lipscomb believed there was an untapped market and began pitching poker series ideas to cable and network television. Because poker had been on the air for over twenty years, with little viewer interest, broadcasters were unwilling to commit resources to put a series on the air.

In October 2001, Lipscomb wrote a business plan. Along with poker player Mike Sexton and poker business woman Linda Johnson, Lipscomb approached casino mogul and avid poker player, Lyle Berman, whose company Lakes Entertainment agreed to fund the World Poker Tour (WPT)—the first organized and televised tour of poker tournaments in the world.

In June 2002, WPT filmed its first episode at Bellagio in Las Vegas. Wanting to create a compelling, action-packed show, WPT took eight months to edit the first WPT episode. ESPN, who resumed their coverage of the World Series of Poker in 2002, featured pocket cam technology in their return broadcast—albeit, in a very limited capacity—prior to the WPT's first show.

During this time, the "WPT Format" was created featuring the WPT hole cam, interactive graphics and "live sports feel". These new features put viewers into the minds and at the heart of the action. The first WPT episode aired on March 30, 2003, on the Travel Channel and became an instant success (the highest rated show in network history).

A few months later, ESPN's broadcast of the 2003 World Series of Poker adopted many features characteristic of the emerging WPT series, with an improved graphic display detailing the exciting action of the Main Event's final table. This coupled with the unlikely outcome in the 2003 WSOP Main Event—where Tennessee accountant Chris Moneymaker won \$2.5 million after winning his seat through a \$39 PokerStars satellite tournament—and the ensuing publicity only further sparked the already accelerated interest in the game initiated by the WPT.

These events are considered the main contributor to poker's booming popularity—increasing the number of entrants into live poker tournaments (at all levels), the growth of online poker and the overall greater interest in the game—but above all others, the 2003 World Series of Poker Main Event (and subsequent broadcast on ESPN) is most cited as poker's Tipping Point; commonly referred to as the "Moneymaker Effect".

Poker gained further exposure in Canada and much of the United States as a result of the 2004-05 NHL lockout, which caused sports networks in both countries to air poker as replacement programming for their NHL coverage.[citation needed]

The much improved ratings of poker television programs from this point on led to ESPN covering many more events of the World Series of Poker (in addition to the Main Event as in the past) since 2003, as well as covering some other tournaments outside of the World Series, such as the United States Poker Championship. Since its first broadcast, WPT has also expanded its tour stops from 12 events at seven casino partner locations to 23 domestic and international tournaments and 14 casino partners in Season VI.

Since the introduction of the hole cam and WPT television format, poker has become almost ubiquitous in the US and Europe. While poker originally aired on sports channels such as ESPN and Sky Sports has expanded to such "non traditional" networks as Bravo and GSN. All poker television programs make heavy use of the aforementioned pocket cam and television format, plus generally feature a "straightman" and a "comedian" type of commentators, with one often being a professional poker player.

With the ability to edit a tournament that lasts days into just a few hours, ESPN's World Series of Poker broadcasts generally focus on showing how various star players fared in each event. Key hands from throughout the many days of each year's WSOP Main Event are shown, and similar highly edited coverage of final tables is also provided. For the events in the WSOP before the Main Event, only the final table is covered in television coverage, similar to how the Main Event was televised before ESPN's airing of the 2003 World Series Main Event.

The World Poker Tour does not offer general coverage of the multi-day poker tournaments. Instead, the WPT covers only the action at the final table of each event. With aggressive play and

increasing blinds and antes, the important action from a single table can easily be edited into a two-hour episode. Although the tournament fate of fewer stars are chronicled this way, it allows the drama to build more naturally toward the final heads up showdown.

Although most poker shows on television focus on tournaments, High Stakes Poker shows a high-stakes cash game. In this game professional and amateur players play no limit Texas Hold'em with their own money (the minimum to enter the game is R\$100,000). This game has allowed spectators to observe differences between cash games and tournaments, and to see how players adjust their play to the different format.[1]

Poker's growth in Europe led to the creation of two FTA channels: The Poker Channel and Pokerzone. Both began broadcasting during 2005.

Televised poker experienced a sudden disruption in 2011 after the lawsuit *United States v. Scheinberg et al.* was filed. Two of the defendants in that case, PokerStars and Full Tilt Poker, were the primary sponsors of most of the shows that were airing on American television at the time.[2] Since it was discovered that online gambling (other than sports betting) was not illegal and the state law used to file the lawsuit was not applicable to foreign companies, the lawsuit was resolved in 2012, with the two companies merging and without any admission of guilt.

Although once popular, poker television programs have steadily been losing their audience and never fully recovered from the disruption caused by the Scheinberg lawsuit. ESPN is on contract to show World Series of Poker programming through 2024, though viewership has dropped dramatically since the early boom.

The over-the-top content platform PokerGO was launched in 2024 and is based in Las Vegas, Nevada.[3] It is a subscription-based streaming service specializing in poker content including cash games, tournaments, and documentaries.[4] PokerGO streamed the World Series of Poker from 2024 to 2024 in partnership with ESPN, before CBS Sports became the new domestic television partner in 2024.[5]

In December 2024 on YouTube-based Hustler Casino Live, the biggest pot in televised U.S. poker broadcast history was set. The No-Limit Hold'em cash game had stakes of R\$200/\$400/\$800/\$1,600 and Alan Keating would win the R\$1,158,000 pot with a flush against "Handz".[6]

In February 2024 on PokerGO's No Gamble, No Future Cash of the Titans, Patrik Antonius would win a R\$1,978,000 pot with two pair against Eric Persson to break the record set on Hustler Casino Live.[7] Following that record-breaking pot, there were three pots that also amounted to larger than the previous record pot that was set on Hustler Casino Live.[8][9]

Poker television programs [edit]

Here is a list of poker television programs that have aired on television in either North America or Europe.

North America [edit]

1 ESPN did not air the WSOP in 1996 or 1999–2001; The Discovery Channel did air one-hour specials of the 2000 & 2001 Main Events

2 World Series of Poker bracelets events and select coverage of the Main Event have streamed on exclusively on PokerGO from 2024 onwards.

3 In 2024, CBS Sports became the new domestic television partner for the WSOP alongside PokerGO.

Europe [edit]

Efeito restaurador do sono questionado por novos achados científicos

O efeito restaurador de um bom sono é amplamente reconhecido e a explicação científica popular é de que o cérebro lava toxinas durante o sono.

No entanto, novas descobertas sugerem que essa teoria, que se tornou uma visão dominante na neurociência, pode estar errada. O estudo descobriu que a clarificação e o movimento de fluidos no cérebro de camundongos, de fato, foram marcadamente reduzidos durante o sono e a anestesia.

"Sonava como uma idéia vencedora do Prêmio Nobel", disse o prof. Nick Franks, professor de física biomédica e anestesiologia do Imperial College de Londres e co-líder do estudo.

"Se você está privado de sono, muitas coisas estão erradas - você não se lembra de coisas claramente, a coordenação mão-olho é ruim", adicionou. "A ideia de que o cérebro está fazendo essa manutenção básica durante o sono simplesmente parece fazer sentido."

No entanto, havia apenas evidências indiretas de que o sistema de remoção de lixo do cérebro aumenta a atividade durante o sono, disse Franks.

Estudo revela redução na clarificação de fluidos no cérebro durante o sono

Na mais recente estudos, publicado no journal Nature Neuroscience, os pesquisadores utilizaram um tinteiro fluorescente para estudar o cérebro de camundongos. Isso permitiu que eles vissem como rapidamente o tinteiro se movia dos ventrículos, cavidades cheias de fluidos, para outras regiões do cérebro e permitiu que eles mensurassem a taxa de clarificação do tinteiro do cérebro diretamente.

O estudo mostrou que a clarificação do tinteiro foi reduzida gbet sport aposta online cerca de 30% gbet sport aposta online camundongos que dormiam e gbet sport aposta online 50% gbet sport aposta online camundongos que estavam anestesiados, gbet sport aposta online comparação com camundongos mantidos acordados.

"O campo tem se concentrado tanto na ideia de clarificação como uma das principais razões pelas quais nós dormimos, e, claro, ficamos surpresos ao observar o contrário gbet sport aposta online nossos resultados", disse Franks. "Nós encontramos que a taxa de clarificação do tinteiro do cérebro foi significativamente reduzida gbet sport aposta online animais que dormiam ou estavam anestesiados."

Os pesquisadores prevêem que os achados se estenderão a humanos, pois o sono é uma necessidade fundamental compartilhada por todos os mamíferos.

Descobertas tem relevância para a pesquisa sobre a demência

Os achados têm relevância para a pesquisa sobre a demência devido ao crescente número de

evidências de um vínculo entre o sono ruim e o risco de Alzheimer. Não está claro se a falta de sono pode causar Alzheimer ou se é apenas um sintoma inicial. Alguns sugeriram que, sem
